

where we supposed to look at systems or connections? is the connection of the system essential to make it work?

my fruits and veggies are connected through touching and juices, i'd call it organic.

but i put them together, in a plastic cup. basically without the plastic cup, they aren't connected. so the cup forms the connection, but the cup is artificial.

purpose of this connection is that i won't get all over my bag.

what can i do with it as it is not designed? my phone is connected to the wifi and my laptop if i open whatsapp. both wireless connections. also my laptop is connected to the mouse, with a plug-in usb but also again wireless. when i plug in the charger, that is connected to the stopcontact and the accu through a wire and a block that is the charger. it is connected to the power and to the building.

i have a book that is connected through connecting paper with your bookbinding and connecting paper with your book. this connection is the person a-theme. the book connected the person who wrote the book connected the person a-theme. the book is also connected to a chip with will activate the alarm in the media there. if not connected.

• sybil and i are connected through our studies. we can also connect through mail and whatsapp. these are social. if we cut the connection we'd still work out fine individually.

• i'm connected to the chairs in this room by the sound they make when someone moves them. the sound waves connect to my ears and it's naturally & fast known that these sounds belong to chairs.

if i would take out the knowledge that it would also be connected to light, but if we detach that as well, these loose components would mean which.

best and system

assignment:

- inspect
- intervene
- document
- reflect

and a living system find a level of the system where you can intervene

edited received structure

where do you position yourself? recall me notes from class def. of hacking.
